

Pig production

Good light, good productivity

Leading advisors and veterinarians recommend **minimum 200 lux for the sows 17 hours a day**. RN Solutions System Light installed right above the sows secure that they receive the right amount of light.

Flexible use and easy installation.

The System light can be used in all stable environments and related areas. With the included mounting clips, and the plug and play connections, the farmer or installation companies can easily do the installation.

Good economy.

With the System light you save min. **60% power** compared to traditional fluorescent light and they have a longer life. The tube lights are at the highest standard, and are constructed to last in a farming environment.

Low usage of power, inexpensive installation and long lifetime, all together secures good economy.
